

Grand Clay 12

Lano Sports' Grand Clay 12 system was developed in response to the growing demand for artificial clay systems.

Grand Clay 12 is designed for tennis at the highest level and for tennis clubs who want to offer tennis facilities all year round. Sliding, playing characteristics, ball bounce and looks are comparable with clay tennis courts.

Moreover, artificial clay courts require very low maintenance (no watering), can be played on immediately after rain as well as throughout the whole year.

Grand Clay 12

BENEFITS OF THE GRAND CLAY 12 SYSTEM

- The use of a non-splitting yarn offers durability and ensures protection of the high wear areas
- The monofilament yarn is able to withstand the wearing properties of the Ace Court Red infill
- The yarn does not split and retains its shape, thereby ensuring consistent playing characteristics throughout the court
- Pace of the court has been tested by ITF and Grand Clay 12 obtains an average value within category 3 ("medium")
- The carpet does not hold water and as the yarn does not split, there is no danger that any loose fibres can affect the porosity of the carpet
- The Ace Court Red infill has been specially selected for its drainage and playing characteristics
- Visible white line markings
